

Code Cleaning

(for hire)

We rapidly clean the code that is **hindering your team the most!**

How it works:

We work hand-in-hand with a single employee for a full day making hundreds of safe and tiny refactorings.

The refactored code will be:

- Testable
 - Modular
 - Readable
 - Less Complex
 - Functionally equivalent
- (no new bugs or features)

Reduced code complexity leads to :

- Fewer bugs
- Increased velocity
- Higher developer satisfaction

Legacy code specialists Jay Bazuzi & Llewellyn Falco will refactor your most complex and difficult code.
